

Georgia-Pacific Introduces DensElement™ Barrier System Project Map

ATLANTA (September 05, 2017) –Georgia-Pacific is proud to introduce the DensElement™ Barrier System project map. This online interactive map identifies the location of projects using DensElement™, in addition to each project's architect and general contractor.

The DensElement™ Barrier System project map showcases the growing number of jobsites adopting DensElement™ Barrier System as their preferred sheathing solution across the U.S. Using the Project Map, online visitors can explore projects by location, or project type (e.g. sports/recreation, education, healthcare, government/municipality, etc).

This new tool creates a visual way for architects, engineers, contractors and building owners to gain perspective on the accelerating adoption of DensElement™ Barrier System on high-profile projects across the country. "DensElement™ is an innovative proven solution progressive architects and contractors can rely on," said Jason Peace, Senior Director of Marketing and Product Management for Georgia-Pacific Gypsum, "and we want to share the successes that these customers are experiencing."

The DensElement™ Barrier System, with AquaKOR™ Technology, integrates the WRB-AB directly into its gypsum core, beneath the fiberglass mat to create a consistent, performance-tested WRB-AB. DensElement™ eliminates the need for building wrap, fluid-applied membranes or peel-and-stick membranes. It's faster to install and can be installed when it's wet outside– saving time and labor. The all-in-one Dens® brand system is finished with PROSOCO R-Guard® FastFlash® liquid flashing to fill and seal joints, fasteners, openings, penetrations and transitions. DensElement™ Barrier System is ABAA listed and WRB-AB approved, and has a customized MasterSpec® specification – 061656 Air and Water Resistive Sheathing Board.

About Georgia-Pacific

Headquartered at Atlanta, Georgia-Pacific is one of the world's leading manufacturers and marketers of building products, tissue, packaging, paper, cellulose and related chemicals. The company employs nearly 35,000 people worldwide. Georgia-Pacific Gypsum pioneered fiberglass mat gypsum technology in 1986 and, for three decades, inspired fundamental changes in the types of gypsum panels specified for walls and roofing in commercial building assemblies. Dens® brand interior and exterior products are the #1 architecturally-specified fiberglass mat gypsum panels. For more information about Georgia-Pacific building products visit www.buildgp.com.
