With the recent pine beetle infestation, reductions in allowable cut, and log shortages limiting the production of Canadian spruce and other species, where can you turn for an alternative for lumber supply and economical design solutions? The answer is Southern Yellow Pine from Georgia-Pacific.

We have the lumber. And lots of it.

Strong and versatile, Southern Yellow Pine is ideal in applications ranging from:

- Treated lumber to general framing, truss design, packaging and crating
- MSR, select structural, #1 and #2 common to #3 and #4 lumber

We have plenty of stock that's the right product for you.

We're also ramping up production. Big time.

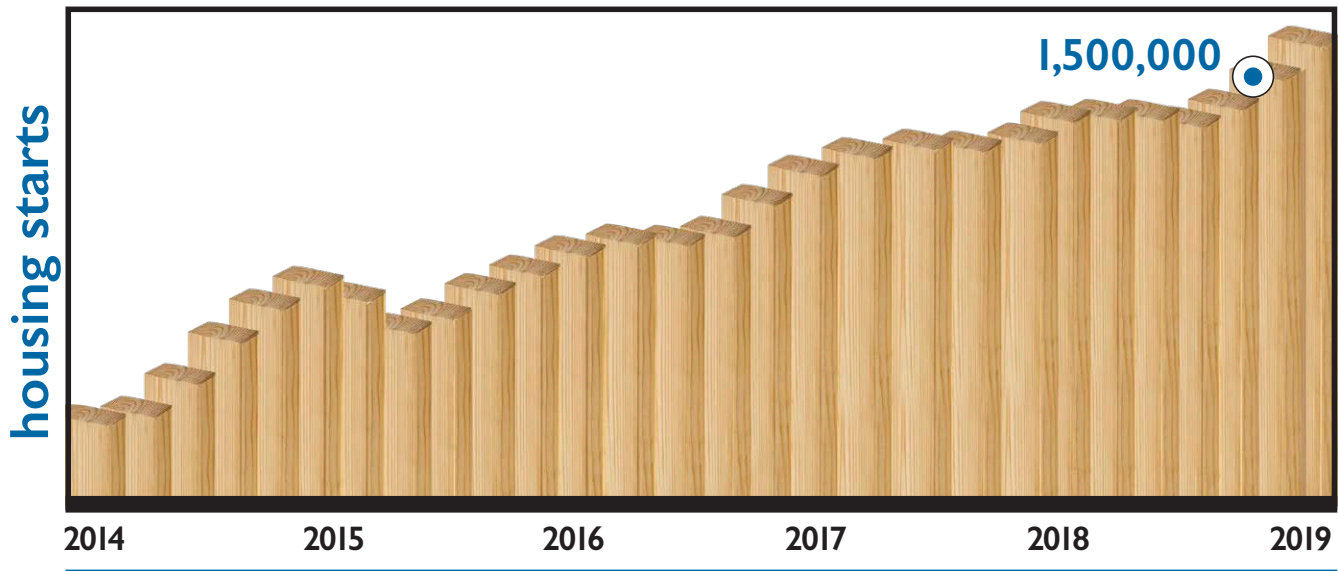

We are investing \$400 million to expand production across the South to improve our current facilities and grow production:

- New state-of-the-art plants opening in Talladega, AL in fall 2018, Warrenton, GA and Albany, GA in 2019
- Numerous investments in our existing SYP mills to improve quality and expand capacity

Your customers depend on you for reliability and we are delivering.
